**REVISED SCOPE OF WORK**  
**FOR**  
**EMERGENCY WATER VALVE PIT REPLACEMENT**  
**AT**  
**TMT II**  
**PHILADELPHIA, PENNSYLVANIA**

PhilaPort is seeking a contractor to replace all associated ductile iron piping and valves in the water pit that feed the Tioga Marine Terminal II. Contractor will excavate and replace existing pipe on the street side of the pit up to the PWD connection. The contractor will replace two (2) 6" gate valves and a tee section that feeds the 2" domestic water. The contractor must have a city certified plumber install a new 6" backflow preventer between the gate valves in place of the two existing check valves. The contractor will also replace the 6" bypass piping and install a gate valve on it. It is the contractor's responsibility to pump out the pit when needed to perform the work. Please note that some of the work may be tide dependent.

The contractor shall stage any fill adjacent to the excavation on a tarp, with erosion control around the perimeter of the staged pile and shall cover the fill with a tarp at the end of each day.

Safety is the responsibility of the contractor.
