

**19-181.T**  
**Clarifications**

**Q1: What weight do you expect your yard trucks to pull?**

In our experience seaports can have two major sets of weight requirements:

- Up to 81,000 LB GCWR
- 81,000 to ~160,000 LB + GCWR (these trucks would be pulling “bomb carts”, possibly loaded with 2 containers vs 1)

A1: Twin pick twenty footers as often as we can, thus 81,000 to 160,000

**Q2: How many hours per day is each of trucks key on?**

A2: Instances of up to 18 – 20 hours.
